

MOO- NAPPED!

Cow & Aliens crash game

Art direction and production plan

Norair Harutyunyan

Review draft September 2026

A moonlit farm abduction

**A confused cow rises toward a UFO.
A determined farmer refuses to let go.**

Game idea

Place a bet, follow the rising multiplier and cash out before the shared round ends. Two independent bet positions share one scene.

Intended audience

Adults of legal gambling age who know short-session crash and instant games. This is the proposed audience for validation.

Design distinction

The cow's confusion and the farmer's effort turn the round into a recognizable comedy. The familiar cashout decision remains easy to understand.

Visual principles

Decision hierarchy

The multiplier leads. Each bet keeps its action and receipt together. The illustration supports the decision.

Drawing and light

Vintage rubber-hose drawing, bold ink contours and restrained grain. Warm beam light separates the cast from the cool farm.

Mobile clarity

Large silhouettes and clear hands, hooves and faces carry the story. Grayscale review checks value separation.

Multiplier lettering reference

Color role	Working value
Ink / separation	#17292C
Warm focal cream	#F4E6BE
Quiet sky teal	#315F69
Beam light	#DED393

Moodboard

01 Staging and depth

Clear focal group; quieter distance.

02 Elastic performance

Line of action and expressive poses.

03 Readable silhouettes

Large dark and light masses.

04 Ink and print

Bold contour; restrained texture.

05 Cow gesture

Simple comic body language.

06 Cow construction

Broad muzzle and separated limbs.

Character performance

Cow: bewildered and expressive

A broad muzzle and clear limb construction support the goofy expression at game size.

Farmer: determined and outmatched

The grip is the key contact point. Preserve the same hand-to-leg relationship through the lift.

Alien and spaceship

Alien: the mischievous pilot

A-pose, two action poses and five expressions complete the character set.

UFO: silhouette and tractor beam

Three-quarter, front, top and side views, with the beam-on state.

Environment and composition

Quiet center

Open sky protects the multiplier and status text.

Depth at the edges

The barn, trees and hills frame the action while keeping the center calm.

Shared flight path

The connected group starts bottom-left and moves toward the top-right.

Main game screen: desktop

Primary read

The large cream multiplier anchors the live scene.

Separate actions

Both panels show their own cashout amount and controls.

Secondary data

Live bets sit beside the game, keeping the action clear.

Main game screen: mobile

Both cashouts active

Live round

A compact scene

The multiplier remains prominent while the farm and cast preserve the theme.

Independent positions

Each panel keeps its stake, actions and settings together.

Responsive validation

Check 360, 390 and 430 px widths, long amounts and browser safe areas.

Betting countdown: desktop

Six final frames carry the setup from grazing to connected flight.

1 second

Round begins

One shared setup

The UFO arrives, the beam lifts the cow, and the farmer secures his grip before the live round.

Live round: one active position

One cashout action is active while the second position shows its bet control.

Motion direction

5s - Grazing

4s - UFO arrival

3s - Beam on

2s - Lift

1s - Grip secured

1.01x - Connected flight

Setup: 5 seconds

Grazing, UFO arrival, beam, lift, jump and secured grip.

Live round

Keep the grip stable during connected flight and bounded sway.

Shared outcome

Release and abduction follow the round end. A personal cashout stays local.

One round, two independent positions

Example state sequence for the native UI build

Shared round	Bet A	Bet B
Betting open	Ready to place a bet	Ready to place a bet
Live	Cashout available	Cashout available
Live at 2.46x	Collected at 2.00x	Still active
Round ended	Collected receipt remains	Loss confirmed
Next round	New bet available	New bet available

A personal cashout changes only its own panel.

Submitting, cashout pending and connection recovery need explicit feedback before a result is confirmed.

Team ownership and workload

Planning estimate for one UI Designer, one 2D Artist and one Spine Animator

Owner	Owned deliverables	Depends on	Person-days
UI Designer	Desktop/mobile masters, components, states and usability review	Direction and mobile composition	12
2D Artist	Cast and farm, contact poses, hidden-area painting and layer exports	Composition and rig feasibility	13
Spine Animator	Rig, setup, flight, round end, reset and export checks	Separated art and approved grip poses	11
Art Lead	Brief, review gates, priorities, production coordination and presentation	Assignment and visual direction	5
Total	Parallel production cycle	15 working days elapsed	41

Scope: art and UI production. Engineering, game mathematics, backend, audio and certification need separate estimates.

Milestones across 15 working days

Each gate protects the work that depends on it

Window	Main work	Acceptance gate	UI	2D	Spine
Days 1-2	Direction, main composition and rig feasibility	Clear hierarchy and readable silhouettes	2	2	1
Days 3-7	UI system, art preparation, contact poses and rig tests	Both actions fit. Layer inventory approved.	4	5	3
Days 8-12	States, animation and integrated scene review	Stable grip and independent cashout feedback	4	4	5
Days 13-15	Corrections, exports, Figma and PDF packaging	Visual, state and submission checks pass	2	2	2
Total effort	36 specialist person-days	Plus 5 Art Lead person-days	12	13	11

Cells show person-days, not elapsed days. Re-estimate after the rig and mobile layout feasibility checks.

Review gates and production handoffs

01 Composition approval

UI and 2D review the same desktop and mobile compositions. The multiplier, both actions and the character silhouette must remain readable at game size.

02 Rig feasibility

The artist supplies complete joints, pivots and overlap order. The animator tests the farmer's grip through setup, flight and release before detailed motion work.

03 Integrated acceptance

The team reviews art inside the actual UI states. The Art Lead records one prioritized feedback list, names an owner for every blocker and approves the final exports.

Risks and mitigation

Risk	Mitigation	Owner / checkpoint
Mobile actions leave the visible area	Set scene height early. Check both panels at 360, 390 and 430 px widths.	UI Designer Day 2 and final QA
Grip or anatomy breaks during motion	Approve contact poses. Complete hidden areas before testing the hand-to-leg rig.	2D Artist + Animator Day 7
AI-assisted art drifts from the direction	Compare contours, anatomy, light and small-size silhouettes to the model boards.	Art Lead Every art gate
Scene contradicts a bet's status	Keep the shared round separate from each panel's action and receipt.	UI + Animator Integrated review
Scope growth delays delivery	Prioritize the main screen and required presentation. Reserve final correction time.	Art Lead Daily scope review

Final assets and Figma source

Complete character set

Cow, farmer, alien and UFO design boards, with poses, expressions and spaceship views.

29 final game screens

Desktop: 6 betting + 8 in-game frames.

Mobile: 6 betting + 9 in-game frames.

Figma: final Crash game section

Norair Harutyunyan Test Task - CRASH GAME

Selected section: 8-10993

[Open final section in Figma](#)

Final supplied Figma exports, approved character boards and the production plan in one presentation.
