

Game Art Lead Test Assignment

Imagine you have joined a game provider developing Instant Games and Slot Games. Your first task is to lead the visual development of a new Instant Game.

Choose one concept: Mines, Plinko, Crash, Wheel, Tower, Coin Flip. You may also propose your own game concept.

The goal of this assignment is to demonstrate not only your design skills, but also your ability to think strategically, organize production, and lead a multidisciplinary Game Art team.

Prepare a presentation

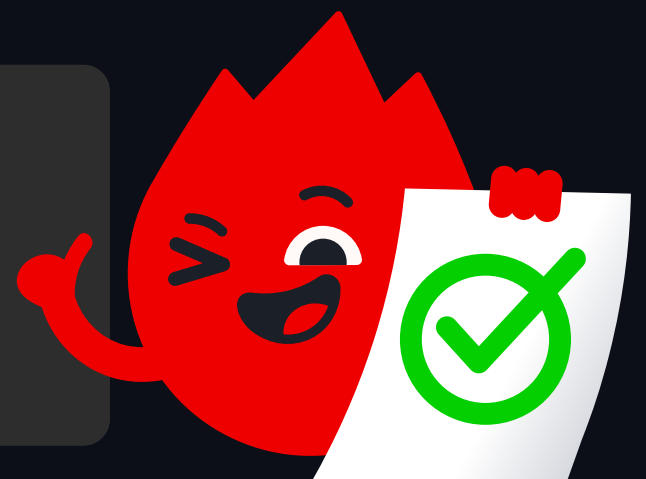

In the first few slides, describe: game idea and theme; target audience; visual style; key visual principles and why this concept stands out from competitors.

Add to presentation: moodboard and main game screen (the screen should demonstrate: visual hierarchy; UI quality; usability; overall art direction).

At the end describe how you would organize production for this project, include: task decomposition; milestone planning; workload distribution between UI Designer, 2D Artist, and 2D Spine Animator; production timeline; potential risks and mitigation.

Requirements

- Create the assignment in Figma;
- Submit a PDF presentation and a Figma link;
- Focus on demonstrating both design quality and leadership thinking;
- The solution should clearly show your ability to organize the work of a multidisciplinary Game Art team;
- AI tools may be used if desired.

**А сегодня в завтрашний день не все могут смотреть.
Вернее, смотреть могут не только лишь все, мало кто может это делать.**
